Qayaq is an Alaska-based heavy civil construction company within the Alaska Civil Construction arm of UIC Commercial Services, a division of Ukpeaġvik Iñupiat Corporation.

- Qayaq Construction specializes in building roads, pads, airports, underground utilities, and resource development projects across Alaska. Its projects are typically unique and challenging improvements to horizontal infrastructure.
- Its fleet of 175+ pieces of heavy equipment are deployed from its facility in Wasilla, convenient to project sites along Alaska's road systems.
- The Qayaq team focuses on delivering a high quality work product while meeting or exceeding project timelines.
- Qayaq uses modern technology, efficient staging, and strategic recruitment to ensure projects are well staffed and delivered on time.

"Qayaq maintained the highest quality standards throughout the project. I was particularly impressed with the team's attention to detail, sending technical information clearly and concisely on a daily basis. And not only did their team finish early, they also left the site in better condition than when they arrived. We had a great experience working with Qayaq."

Capabilities and services

- Road Construction
- Airport Construction
- Seaport and Seawall Construction
- Underground Utilities
- Resource Development
- Erosion Control
- Reclamation
- Site Development
- Remote Construction
- 24-hour operations
- Construction of laydown storage yards
- New pit development
- Winter construction schedule
- Accelerated delivery approach
- Innovative construction solutions

Past Performance Highlight: Manh Choh Mine Access Road

Constructed 15 miles of new mine access road under an accelerated delivery schedule, completing the full scope in only 12 months, two months ahead of schedule. Crews worked 24 hours a day through winter conditions in full compliance with MSHA regulations. The project included over 2.7 million cubic yards of excavation, drainage and erosion control improvements, culvert installations, and treatment ponds designed to capture all site surface water. Qayaq's exceptional production rates, coordination, and safety performance earned the project an Exceptional rating from the owner for exceeding contractual requirements.
